The main research activities carried out by the Research Units of the Section of Psychiatry and the Section of Clinical Psychology focus on geography of mental health, costs evaluation, evaluation of mental health services, effectiveness of psychosocial interventions, environmental, clinical and biological predictors of outcome, genetics and neuroimaging of schizophrenic and bipolar disorders, clinical psychopharmacology, communication in medicine. The staff (more than 50 persons) includes psychiatrists, clinical psychologists, computer scientists, physicists, geographers and social scientists, statisticians, technicians and secretaries.

In 1987 the Section of Psychiatry and Clinical Psychology has been designated by the World Health Organization (WHO) - due to its reputation in research, teaching and training activities - as WHO Collaborating Centre for Research and Training in Mental Health and Service Evaluation. The last redesignation occurred in November 2013 and will last four years.

Light blue members of Psychiatry Section and white members of Clinical Psychology Section
The **Hirsch index** (h index) is an indicator of citations of a researcher’s scientific publications, proposed in 2005 by Professor Jorge E. Hirsch, University of California, San Diego, USA (Hirsch, 2005; 2007).

This index may be defined as the number of papers with citation number equal or higher than h (for example **h index** 5 means that at least 5 papers by that author were cited at least 5 times). Higher the **h index** higher is supposed to be the impact of the researcher in his/her scientific community. **H index** depends from the level of seniority of the researcher.

Many database can be used to calculate the **h index**. Therefore it may change according to the database and also according to the time span covered by the database. It is therefore necessary to indicate, together with the **h index**, the database used and the time span (number of years) covered by the database.

The **Library of the School of Medicine of the University of Verona** estimates the **h index** on papers included in the **ISI Web of Knowledge** published from 1990 onwards.

In several Universities abroad and in some scientific institutions in Italy it is suggested to researchers to include their **h index** in their **CV**, so it may be considered, together with other indicators and characteristics, for promotion and selection, when new positions become available.

THE RESEARCH UNITS OF THE SECTION OF PSYCHIATRY
(Head: Professor Mirella Ruggeri)

OVERALL VIEW

The Section of Psychiatry (Department of Public Health and Community Medicine, University of Verona) provides care, education and research. Clinical activity takes place in the Psychiatric University Clinic, in the Mental Health Centre, in the staffed residential facilities and apartments for long-term patients, in the Outpatient Departments, and in other community-based facilities, which constitute an integrated system of mental health care, dedicated to the residents in the South-Verona area (100,000 inhabitants) and run by the University of Verona in collaboration with the Hospital Trust and the Local Health Trust No.20.

Education and training is provided for undergraduate students in medicine, in psychosocial rehabilitation and in other health professions, post-graduate residents and post-graduate Ph.D. students.

The areas of research regard epidemiological psychiatry, outcome of psychosocial interventions, genetics and neuroimaging of schizophrenic and bipolar disorders, clinical psychopharmacology, geography of mental health, costs evaluation and evaluation of mental health services.

1) Environmental, Clinical and Genetic Determinants of Outcome of Mental Disorders

Coordinator: Professor Mirella Ruggeri

Dr. Chiara Bonetto, Dr. Carla Comacchio, Dr. Doriana Cristofalo, Dr. Katia De Santi, Dr. Laura Iozzino, Dr. Elisa Ira, Dr. Antonio Lasalvia, Dr. Elisabetta Miglietta, Dr. Sara Petterlini, Dr. Simona Tomassi, Prof. Sarah Tosato, Dr. Gioia Zanatta, Dr. Silvia Zoppei

The Unit has worked since the ‘80s with the aim of characterizing the outcome of the mental disorders. Many longitudinal studies both in prevalence and incidence samples have been carried on to identify predictive patterns of favourable and unfavourable outcomes in naturalistic settings, using a multidimensional approach to include objective and subjective variables, and taking into account the relative role of clinical, social, service variables and genetic factors on the course of illness. At the beginning of 2005 the Unit launched the Psychosis Incident Cohort Outcome Study (PICOS), a multisite longitudinal naturalistic research involving 28 mental health services in the Veneto Region. The PICOS aimed to explore the relationships between clinical and genetic factors in predicting the outcome in an epidemiologically representative cohort of first-episode psychotic patients treated by public mental health services. The 5-year follow-up is nearly finished.

The Unit has recently conducted the Research Program GET UP (Genetics, Endophenotypes and Treatment: Understanding early Psychosis), funded by the Italian Ministry of Health with Professor Ruggeri as National Coordinator. It is constituted by four partner projects. Its main axis is a cluster randomized controlled trial (PIANO trial) involving 116 Mental Health Centres located in a catchment area of nearly 10 million inhabitants: The PIANO trial aimed to: 1) test the feasibility and cost-effectiveness of multi-component psychosocial intervention, fostering evidence-based innovation in the area of first-episode psychosis; 2) verify the clinical routine limits of this approach, i.e. identifying barriers that obstacle its application and situations in which this type of treatment might not be effective or appropriate; 3) identify clinical, psychological, and environmental predictors of treatment efficacy in first-episode psychosis. The GET UP also aimed to: 1) evaluate the role of pharmaco-genetic analysis in improving pharmacological treatment efficacy, and 2) identify morpho-functional and
neuropsychological factors influencing stress, treatment response, and outcome. The study was ended in 2012 and publication of findings is currently in progress. Moreover, the Unit is collaborating in the SGENE project, a large-scale genome-wide association study of schizophrenia addressing variation in expressivity and contribution from environmental factors. Additionally, it runs some projects in the area of Liaison Psychiatry with the aim to developing innovative treatments for patients affected by mental disorders in comorbidity with physical illnesses, and evaluate their effectiveness.

Since 2011 the Unit has joined, as associated partner, the EU GEI (EUropean network of national schizophrenia network studying Gene-Environment Interaction), a EU funded multisite international research which aims to identify, over a 5-year period, the interactive genetic, clinical and environmental determinants involved in the development, severity and outcome of schizophrenia. The partners in EU GEI represent the nationally funded schizophrenia / mental health networks of the UK, Netherlands, France, Spain, Turkey and Germany, as well as other research institutes and a number of SME’s in Austria, Belgium, Ireland, Italy, Switzerland, and outside the EU in Hong Kong/China and Australia. The project, started on May 1, 2010, will run until May 1, 2015.

The Unit is currently WP leader of the multisite COFI research (COMparing policy framework, structure, effectiveness and cost-effectiveness of Functional and Integrated systems of mental health care), a EU project funded under 7th Framework Programme. The overall aim of COFI is to compare the outcomes of functional (i.e. after hospital admission other clinicians are in contact with the patient for outpatient treatment after discharge) and integrated (i.e. after hospital admission the same clinician is in contact, in face-to-face meetings, with the patient for outpatient treatment after discharge) systems of mental health care across 5 European countries (Belgium, England, Germany, Italy and Poland) in a one year-follow up. The project, started on February 1, 2014, will run until January 31, 2018.

### 2) Psychiatric Register, Economics & Geography of Mental Health

**Coordinator:** Professor Francesco Amaddeo

Dr. Mario Ballarin, Dr. Gaia Cetrano, Dr. Valeria Donisi, Dr. Laura Grigoletti, Sig.ra Valeria Marchi, Sig.ra Cristina Pighi, Dr. Laura Rabbi, Dr. Alberto Rossi, Dr. Damiano Salazzari, Dr. Federico Tedeschi

A psychiatric case register (PCR) was started on 31 December 1978 and is used for clinical, administrative and research purposes. For research, the PCR is used for: longitudinal analyses of patterns of care; studies on incidence and prevalence and related factors; services utilisation; comparisons with other case-register areas; and costs of care and outcome. The PCR has facilitated the detailed observation of changes in Italian mental health care since the Italian psychiatric reform. The Unit has carried out a series of studies in prevalence and incidence samples to explore the relationships between the socio-demographic and clinical characteristics of patients and the costs of community-based mental health care and to assess the association between Socio-Economic Status (SES), services utilisation and costs. Lately the Unit has developed researches regarding the mortality of psychiatric patients, analyzing in detail the general mortality, the avoidable mortality, and the mortality for cancer. Data on mortality of psychiatric patients will also be compared with those of a psychiatric Service in Tromso, Norway. The Unit is conducting a comparison between this Psychiatric Service in Tromso and the Psychiatric Service of Verona Sud.

The Unit has participated to a national study (funded by the Ministry of Health) that has permitted to develop a new funding system for community-based Mental Health Services. The Unit coordinated a National study on "Socio-economic status, urbanisation and mental health" that use a health geography approach. The Unit collaborated with the WHO centres based in Geneva and Copenhagen on a research project consisting in an evaluation of the psychiatric assistance in Ukraine, Georgia and Moldova.

The Unit coordinated the REFINEMENT (REsearch on FINancing systems’ Effect on the quality of MENtal health care) project, a FP7-HEALTH-2010 project, that analyzed the relationship between different models of health care financing and the extent to which mental health care services can meet the goals of high quality, equity, efficiency and better long term health outcomes.
The Unit is now involved in another FP7 project, the CEPHOS-LINK (Comparative Effectiveness Research on Psychiatric Hospitalisation), which aims to compare different types of health service interventions in terms of differences in rehospitalisation outcomes in adult patients who have been discharged with a psychiatric diagnosis from hospital. CEPHOS-LINK will use state-of-the-art approaches using large 'real world' electronic databases allowing for specific comparisons and detailed analysis to be made.

3) Clinical Psychopharmacology and Drug Epidemiology

Coordinator: Professor Corrado Barbui

Dr. Irene Bighelli, Dr. Michela Nosè, Dr. Giovanni Ostuzzi, Dr. Marianna Purgato, Dr. Gianluca Rambaldelli (part time), Dr. Giulia Turrini

The main research interests of the Unit include: (a) pharmacoepidemiology, oriented to describe the beneficial and harmful effects of psychotropic drugs in ordinary practice; (b) randomized controlled trials, oriented to assess the efficacy and tolerability profile of psychotropic drugs in experimental conditions; (c) systematic reviews, oriented to summarize clinical trial findings using meta-analytical techniques. Recent achievements of the Unit include the production of systematic reviews in the field of antidepressants and antipsychotics, together with the Cochrane Common Mental Disorders Group (CMD) group; the development of tools oriented to assist the World Health Organization to improve the rational use of psychotropic drugs in low and middle income countries; the production of evidence based guidelines, covering the pathway from knowledge production to knowledge uptake in clinical practice.

The Unit developed and coordinates a network of psychiatric services to collect data for multi centre studies (STAR Network – Servizi Territoriali Associati per la Ricerca). STAR Network has finalised a pharmaco-epidemiological study on electrocardiovascular abnormalities in people exposed to psychotropic drugs, and is currently recruiting patients for a multi-centre study on long acting antipsychotics.

The mental health of populations exposed to conflicts and humanitarian crises, including migrants displaced in high income countries, is another topic of interest.

The projects of the Unit are financially supported by organisations not linked with drug companies.

4) Brain Imaging and Neuropsychology

Coordinator: Dr. Paolo Brambilla, Co-coordinator: Dr. Marcella Bellani

Dr. Olivia Danzi, Dr. Nicola Dusi, Dr. Veronica Marinelli, Dr. Cinzia Perlini (part-time), Dr. Gianluca Rambaldelli (part time), Dr. Maria Gloria Rossetti, Dr. Letizia Squarcina

The Unit of Brain Imaging and Neuropsychology (RUBIN) was first established in the spring of 2003. Since 2005 it is a member of the ICBN InterUniversity Center of Behavioral Neuroscience (University of Udine and University of Verona). Our main interest is to better understand the neurobiological underpinnings of major psychoses (bipolar disorder, schizophrenia, and unipolar depression) and autism and to study the possible connection with outcome, neuropsychological and biological measures, using a multidimensional approach. The main aim of our research group is to increase the knowledge of possible neural circuitry in these disorders, to study the timing and development of the neuroanatomical alterations, in order to achieve the knowledge for an early detection and treatment of these disorders. The subjects are usually followed in order to have a better idea of the neural profile over time. The main fields of research include brain imaging, neuropsychology, and neuropsychimmuneology.
The Research Unit mainly addresses factors necessary to create and successfully implement policy to promote human rights, dignity and general health status of psychiatric patients. The Unit is involved in two multicentric three-year EU projects: ITHACA and HELPS, recently closed. Currently, the PHYSICO protocol is ongoing, it addresses the physical health of mental patients and draws on the synergy between the South Verona Community Mental Health Service and the Department of Prevention (Ulss20 Verona), resulting in the intervention program studied. Moreover, the Unit has worked on the Bio.Ve.D.A., a project aiming to develop a register of eating-disorders taking advantage of the fact that the Unit of Psychotherapy, which hosts this Research Unit, has been appointed Regional Centre for Eating Disorders. Finally, Self-Help II, now in the phase of processing data, investigates the contribution of a large consumer self-help group, based in Verona, to improve participation of mental patients in society at large.
THE RESEARCH UNITS OF THE SECTION OF CLINICAL PSYCHOLOGY
(Head: Professor Lidia Del Piccolo)

OVERALL VIEW

The Section of Clinical Psychology (Department of Neurosciences, Biomedicine and Movement Sciences, University of Verona) provides care, education and research. Clinical activity takes place in the Service of Psychosomatics and Medical Psychology, which provides outpatient care for patients with panic attacks and affective disorders related to medical conditions, as well as consultations for hospital patients and doctors of other departments of the Academic General Hospital (800 beds).

Education and training is provided either for undergraduate students in medicine or in other health professions, post-graduate residents, trainees in psychotherapy and post-graduate Ph.D. students or physicians who attend master courses in risk management and communication skills.

The areas of research regard Clinical Psychology and Communication in Healthcare.

Clinical Psychology and Communication in Healthcare

Coordinator: Professor Lidia Del Piccolo
Dr. Claudia Goss, Dr. Maria Angela Mazzi, Dr. Cinzia Perlini (part-time), Dr. Michela Rimondini.
Dr. Alessandro Bottacini, post-doc; Dr. Olivia Danzi, Ph.D student

During the last decade, the Unit has developed and standardised several instruments and methodologies to study doctor patient interaction both in Primary Care and in Psychiatry. The unit has developed several coding instruments to classify doctor-patient communication (Verona Medical Interview Classification System, VR-MICS; Verona Psychiatry Interview Classification System, VR-PICS; Verona Patient-centred Communication rating scale, VR-COPE). Together with European researchers (Verona network on sequence analysis), a consensus based coding system, the Verona Coding of Emotional Sequences (VR-CODES), for identifying patient cues and concerns expressed in a medical encounter and subsequent health provider responses has been published on the European Association for Communication in Healthacer (EACH) site (http://www.each.eu/research/verona-coding-system/).

The Unit has carried out the evaluation of the efficacy of training courses in improving communication skills of General Practitioners and Psychiatrists, and has studied the information-giving process in primary care consultations and in psychiatric outpatient intake interviews.

Currently, the Unit is engaged in nine main studies:

1. GULIVER a multi-centre study on patients’ perception of doctors' clinical communication skills (Dr. Maria Angela Mazzi, Dr. Michela Rimondini. International Coordinator: Prof. Jozien Bensing)

2. GULIVER II a multi-centre study on patients’ perception of doctors’ clinical communication skills (Dr. Maria Angela Mazzi, Dr. Michela Rimondini. International Coordinator: Prof. Jozien Bensing) within the european study QUALICOPC - a multi-country study evaluating quality, costs and equity in primary care (national coordinator: dr.ssa Seghieri)

3. PATIENTS-PATient Involvement and EmpowermeNT in Safety-Psychiatry. Patients' empowerment in the management of clinical risk in Psychiatry, health providers opinions collected by focus groups (Dr Maria Angela Mazzi. Coordinator: dr.Michela Rimondini)
4. Hematologists’ attitude toward the disclosure of a new diagnosis of malignant disease: results from a multi-center survey in northern Italy (Dr. Michela Rimondini, Dr. Claudia Goss, Dr. Maria Angela Mazzi. Coordinator: Dr. Cristina Tecchio).

5. Incidence and causes of erectile dysfunction in patients undergoing hematopoietic stem cells for allogeneic hematological malignancies (Dr. Michela Rimondini-coordinator: Dr. Cristina Tecchio).

6. Involvement of breast CANcer patients during oncological consultations: a multicentre randomised controlled trial (INCA). A randomized clinical trial on the informative needs of breast cancer patients and their involvement in treatment decisions (Verona, Brescia) (Principal investigator: Dr. Claudia Goss). Within this study, emotional aspects of doctor-patient communication are analysed by using quantitative and qualitative methods (Prof. Lidia Del Piccolo)

7. GET-Up TRUMPET 2. A study on the informative needs of patients with early onset of psychosis, a multi-centre study, sub project of the GET-Up study coordinated by Prof. Ruggeri.

8. AutoMS: Autonomy preferences, risk knowledge and decision-making performance in multiple sclerosis patients (Dr. Claudia Goss, Prof. Lidia Del Piccolo. Italian Coordinator: Dr. Alessandra Solari) a multi-centre study in collaboration with the Besta Neurological Institute of Milan.

9. Prognostic disclosure in the palliative phase of breast cancer: Quality of communication from a patient perspective”. A study on the psycho-physiological correlates (skin conductance, hearth and respiratory rate) of doctor-patient communication, in collaboration with other European labs (NIVEL - Netherlands Institute for Health Services Research, Oslo University and AMC Amsterdam University). Principal investigator: prof. Lidia Del Piccolo).
In 1987 the Section of Psychiatry and Clinical Psychology has been designated by the World Health Organization (WHO) - due to its reputation in research, teaching and training activities - as *WHO Collaborating Centre for Research and Training in Mental Health and Service Evaluation*. The last redesignation occurred in November 2013 and will last four years.

The main activities of the WHO Collaborating Centre are:

1. Participation in collaborative projects under the Organization’s leadership, including systematic reviews and meta-analyses, implementation studies and analyses of existing WHO databases.

2. Planning, organising and conducting, jointly with WHO, training activities such as courses and seminars and information exchange.

3. Collecting, collating and disseminating, on behalf of WHO, scientific information on selected topics, as well as providing expert comments and advice on various draft documents circulated by WHO.

Recent achievements of the WHO Collaborating Centre include the following.

### (1) Contribution to the development of mhGAP Programme

In recent years WHO has developed the Mental Health Gap Action Programme (mhGAP). An essential component of mhGAP is the development of an integrated package of interventions for mental disorders identified as conditions of high priority in the programme for the low and middle income countries (LAMIC). The WHO Collaborating Centre in Verona has been assisting WHO by:

- developing evidence profiles using the Grading of Recommendations Assessment, Development and Evaluation (GRADE) methodology;
- revising evidence profiles developed by WHO staff and external consultants;
- harmonising all evidence profiles that were subsequently used to draft the mhGAP Intervention Guide;
- updating and revising evidence profiles using the GRADE methodology.

Current version of the WHO mhGAP Intervention Guide is available at:

Updated version of the mhGAP Guideline for Mental, Neurological and Substance use Disorders is available at:

### (2) Contribution to the development of a WHO Evidence Resource Centre

The WHO Collaborating Centre in Verona supported WHO in the development of an Electronic Library of Interventions for Mental Disorders, called mhGAP Evidence Resource Centre (ERC). The purpose of the ERC is to provide easy access to the best clinical and non-clinical information and best practice to
everyone in health and social care who takes decisions about treatments. The WHO Collaborating Centre in Verona assisted WHO by:

- Drafting some documents that were published in the ERC;
- Revising all materials that were published in the ERC;
- Conducting literature searches on several international databases to identify systematic reviews on treatments included in the mhGAP programme and in the ERC;
- Updating all the background evidence that was incorporated in the updated evidence profiles.

(3) Development of a thematic paper on access and rational use of medicines for mental disorders

In many low-income countries overburdened health systems often are not able to provide even the most basic mental health care, including the provision of medicines for mental disorders. Broadly defined, access to medicines for mental disorders (or psychotropic medicines) includes rational selection, availability and affordability, as well as appropriate use. Barriers to ensuring access to psychotropic medicines exist at the following levels of the healthcare system: intergovernmental; regional, national, or province; district; community, household, or individual.

The WHO Collaborating Centre in Verona, with technical collaboration of the World Health Organization Department of Mental Health and Substance Abuse and the Gulbenkian Mental Health Platform, is developing a report intended for use as a manual by policy-makers, public health professionals, and clinicians working in regional health offices, national health ministries, or at the district level and in charge of planning improvements to mental health systems. The specific aims of this report are two-fold:

- Examine current barriers to access to psychotropic medicines across four components (rational selection, availability, affordability, and appropriate use) using theoretical frameworks, evidence review, and country-specific examples.
- Outline key priority actions recommended at four levels of the healthcare system (international; regional, national, or province; district; community, household, or individual).
This list includes full papers, chapters of books and monographs and volumes published in 2014. The Impact Factor (I.F.) scores reported refer to the 2013 release, i.e. the one valid at the date of publication or of the paper’s acceptance by the journal. The list includes also Letters, but only those peer-reviewed and published in outstanding Journals. According to the rules of the Scientific Committee of the Medical School of the University of Verona these Letters are given an I.F. score that is 10% of the original score. Abstracts of papers presented at scientific Meetings and Congresses and posters are NOT included.

For further information and for receiving copies of papers included in this list, please contact our Librarian: Dr. Lucia Convertino Tel. +39 045 812 6415 lucia.convertino@univr.it

</table>
THE SOUTH-VERONA COMMUNITY-BASED MENTAL HEALTH SERVICE: CLINICAL AND TEACHING ACTIVITIES

The Section of Psychiatry and the Section of Clinical Psychology, Department of Public Health and Community Medicine, University of Verona, provide Research, Clinical Activity, Education and Training.

Overall view of Clinical Activities

Clinical activity takes place in the Academic General Hospital of Verona (University Department of Psychiatry and Psychiatric University Clinic and University Department of Psychosomatics and Clinical Psychology), in the South-Verona Mental Health Centre (a multi-purpose facility providing outpatient consultations, day care, crisis intervention, home visits and rehabilitation), in the staffed residential facilities and apartments, in the Outpatient Departments, and in other community-based facilities, which constitute an integrated Service: the South-Verona Community Psychiatric Service (CPS) (Head: Professor Michele Tansella and, since June 10, 2013, Professor Mirella Ruggeri). The South-Verona CPS was established in 1978, according to the provision of the Italian Psychiatric Reform, and is responsible for providing comprehensive psychiatric care (prevention, therapy and rehabilitation) for all those living in South-Verona, an area of 100,000 inhabitants.

Attached to the University Department of Psychiatry and Psychiatric University Clinic (Head: Professor Michele Tansella and, since June 10, 2013, Professor Mirella Ruggeri) there are three Clinical Units: The Unit of Psychotherapy (Professor Lorenzo Burti) that provides individual and family psychotherapy, the Unit of Psychology and Therapy of Eating Disorders (Dr. Roberta Siani) and the Unit of Monitoring and Evaluating Patterns of Care (Professor Francesco Amaddeo). Our clinical facilities include also the University Department of Psychosomatics and Clinical Psychology (Head: Professor Mirella Ruggeri), with the attached Clinical Unit of Clinical Psychology and Communication in Medicine (Professor Christa Zimmermann; after August 1st 2013 Professor Lidia Del Piccolo), that provide specialist outpatient care by psychiatrists and clinical psychologists for patients with panic attacks and affective disorders, as well as consultations for patients and doctors of other departments of the Verona Academic General Hospital (800 beds) and psychological assessments and treatment.

General organization of the South-Verona Community Psychiatric Service (CPS)

The South-Verona Community Psychiatric Service (CPS) was designed as a unitary service, in which great emphasis is given to communication between staff and to integration between the various clinical activities. It is first described here in general terms. The various facilities and services available to South-Verona residents are then detailed. Staff members are divided into two multidisciplinary teams, each serving a sub-sector of the South-Verona catchment area. The two teams are organised according to a "single staff module": with the exception of nurses, all staff (psychiatrists, psychologists, social workers) work both inside and outside the hospital setting and retain responsibility for the same patients across different components of the service and through all phases of treatment. There are hospital nurses (who provide 24 hour cover over three shifts in the general hospital ward), hostel nurses, Mental Health Centre nurses and community nurses (who provide cover over two shifts, from 8 a.m. to 8 p.m., and are on call, two at a time, during the weekends and overnight). Of the nursing staff, only the community nurses are assigned to one of the three teams.

This module was designed to ensure continuity of care, both longitudinal continuity (through the different phases of treatment) and cross-sectional continuity (through the different components of the service). Within each team, each patient is assigned to one particular member of the staff (the "case manager"). Case managers may be psychiatrists, psychologists or senior nurses.
The South-Verona CPS is well integrated, allowing patients easy access to most components and easy transfer from one component to another, according to need. A "drop in" approach is encouraged at the Mental Health Centre and patients can seek care from specialist services directly, without referral from GPs. However most patients are referred by GPs and referred back to them by the CPS, when it is felt that less stigmatising care can be provided through primary care. There are good relations between primary and secondary care and regular meetings are held with GPs to discuss how to improve the primary care / mental health service interface.

**Components of the CPS**

The Mental Health Centre is the linchpin of the CPS and is where staff meetings take place and interventions are planned and initiated. The Centre, located in an old, recently refurbished three-floor building with a garden, not far away from the University general hospital, is open on weekdays, from 8 a.m. to 8 p.m. and on Saturdays from 8 a.m. to 5 p.m. Therapeutic programs include crisis intervention, day care for acute and chronic patients and social skills groups. The Centre also serves as an informal meeting place for Service "users", and it is conceived as a flexible resource whose organisation can be modified from time to time to meet the users' changing needs.

The psychiatric ward (University Psychiatric Clinic) is an open ward of 16 beds located in the University general hospital which has in total about 800 beds. It is a traditional hospital ward, similar to all other medical wards in the hospital and its door is locked when there are patients who have been compulsory admitted.

The outpatient department provides psychiatric consultations and individual and family therapy. Offices are located in the general hospital and in the Mental Health Centre.

The consultation liaison service for other medical and surgical departments (run by the University Department of Psychosomatics and Medical Psychology directed by Professor F. Amaddeo) maintains psychiatric integration with other hospital-based medical activities and ensures continuing contact with our patients when hospitalised for medical reasons; it runs also a series of out-patients activities, including visits for patients with mental disorders in comorbidity with physical illnesses and patients affected by Panic Disorder. Department of Clinical Psychology (Professor Lidia Del Piccolo), that provides psychological assessment and care for a variety of mental disorders and for psychological suffering and runs courses and teaching activities for improving the quality of communication between patients and members of the clinical teams.

The emergency service. There is a psychiatric emergency service at the general hospital, open 24 hours a day, seven days a week. It is run by a psychiatrist from our team, who is on call. To ensure therapeutic continuity, he/she is usually assisted during working hours by the treatment team members who are (or will be) in charge of the patient requiring the urgent intervention. Additionally, during night and weekend, two psychiatric nurses from our team, supervised by a psychiatrist, are on call to provide care in the supported flats and hostel, as well as at patients' homes. Home visits can be made to provide crisis intervention in response to emergency calls, but for chronic patients these are usually planned in advance and offer regular, long-term support and care to patients and their families with the goal of minimising relapses and hospital admissions. Home visits are highly regarded by the service and are well accepted by patients and families.

Two group homes and four apartments (with a total number of 18 beds), offering different levels of supervision, and one hostel (with 12 beds, supervised 24 hours a day by support workers and counsellors and occasionally visited by nurses), are also available.

Unit of Psychotherapy (Professor Lorenzo Burti), that provides individual and family psychotherapy. Unit of Psychology and Therapy of Eating Disorders (Dr. Rosa Dall'Agnola), that provides assessment and therapy and coordinates long-term care for people with eating disorders. Unit of Monitoring and Evaluating Patterns of Care (Professor Francesco Amaddeo) that provides data and coordinates care for long-term care of patients with mental disorders.
Distinctive features of South-Verona Community Psychiatric Service

The features of the South-Verona Community Psychiatric Service that could be considered "distinctive" to the service are as follows:

a. It is not experimental; the South-Verona initiative is a long-term undertaking, implemented by legislation in 1978 and based on a National Act flexible enough to permit development of a system of care which is suited to local needs;
b. It was designed and is still functioning to substitute, not to supplement, the old hospital-based system of care. The front doors of the mental hospital have been closed to new admissions since May 1978 and to all admissions since January 1982;
c. The clinical model developed in South-Verona is "systemic" and with a "single-staff module": all staff apart from nurses work both in the hospital and in the community and remain responsible for the care of the same patients across different components of the service and through the different phases of care. The "single staff" module is designed to ensure continuity of care and to encourage commitment and the assumption of full responsibility by the service.
d. The South-Verona CPS is well integrated, and allows easy and informal access to patients. It is a public service run by the National Health Service. Payment is not required, except for a fee for outpatient visits (this applies only to more affluent patients and for those who are not considered long-term).
e. Every effort is made to meet user’s needs with individual care plans. A well established clinical practice in South-Verona is the critical examination of the user’s explicit requests, in order to recognise what his/her real needs are. Included in this process is the need to question who originated the request for intervention (the real, often disguised or secret client), besides the usual assessment of psychosocial, precipitating and intervening factors.
f. Although not designed as an experiment, the South-Verona initiative was from the beginning associated with a series of long-term research projects for monitoring and evaluating the changes in service organisation. Many projects use an epidemiological approach and include evaluations of needs, costs and outcomes.

Education & Training

Education and training is provided for undergraduate medical students, for post-graduate residents at the Specialization School of Psychiatry (Director: Professor Mirella Ruggeri) of the University of Verona (advanced courses in Clinical Psychiatry, Social Psychiatry, Clinical Psychology, Psychotherapy and Clinical Psychopharmacology), for post-graduate Ph.D. students in Psychology and Psychiatry (PhD Course in Psychological and Psychiatric Sciences) (Director: Professor Mirella Ruggeri), and for undergraduate students in psychosocial rehabilitation (Corso di Laurea in Tecniche della Riabilitazione Psichiatrica) (Director: Professor Lorenzo Burti). Short courses in Psychiatry, Medical and Clinical Psychology, Psychosomatics, and Psychogeriatrics are also provided for other Schools of Specialisation within the Medical School of the University of Verona.

The South-Verona CPS provides undergraduate and postgraduate students with the opportunity to obtain up-to-date education, and to receive their training in settings identical to those that they will find in their professional life, under the supervision of experienced personnel.

MAIN ON-GOING RESEARCH PROJECTS 2011-2015

SECTION OF PSYCHIATRY

Research Unit

Psychiatric Register, Economics and Geography of Mental Health

Coordinator: Professor Francesco Amaddeo, MD, PhD

Research on Financing systems' Effect on the Quality of Mental Health Care – REFINEMENT, funded by the EU-FP7.

(F. Amaddeo, L. Grigoletti, V. Donisi, I. Montagni, D. Salazzari & F. Tedeschi)

Research on general mortality and other specifications (avoidable, cancer, in comorbidity) among psychiatric patients. A case register study up to 25-years.

(F. Amaddeo, A. Biggeri, L. Grigoletti, G. Perini, B. Hanife, M. Tansella)

Geographical distance, socio-economic determinants and utilization of community-based mental health services.

(D. Salazzari, F. Tedeschi, L. Grigoletti, L. Rabbi, V. Donisi, M. Ballarin, M. Tansella & F. Amaddeo)

Atlas of Mental Health Care in the Verona Health District.

(G. Zulian, F. Amaddeo, L. Grigoletti)

Quality assessment of mental health and social care services - findings from the european Refinement project and an italian multicentre study.

(G. Cetrano, L. Rabbi, F. Tedeschi, F. Amaddeo, D. Lamonaca, A. Lora, G. Gosetti)

Supervising and monitoring the “Hub & Spoke Stroke Network” using record linkage and geographical approach with administrative data (registries): the Verona experience.

(D. Salazzari, F. Tedeschi, V. Donisi, L. Grigoletti, F. Amaddeo, N. Micheletti, R. Mirandola, G. Bisoffi)

Comparative Effectiveness Research on Psychiatric Hospitalisation (CEPHOS-LINK). A multi-national study funded by the 7th framework program of the European Commission

(D. Salazzari, F. Tedeschi, V. Donisi, M. Ballarin, F. Amaddeo)

Research Unit

Environmental, Clinical and Genetic Determinants of Outcome of Mental Disorders

Coordinator: Professor Mirella Ruggeri, MD, PhD

GET UP (Genetics, Endophenotypes and Treatment: Understanding early Psychosis) Project.

SGENE: A Large Scale Genome-Wide Association Study of Schizophrenia addressing variation in expressivity and contribution from environmental factors.
(S. Tosato, C. Bonetto & M. Ruggeri)

European network of national schizophrenia network studying Gene-Environment Interaction (EU GEI).

Identification and treatment of depression in comorbidity with physical illness: the DECO-TRE Project.

PICOS- Psychosis Incident Cohort Outcome Study. A multisite collaborative project on the clinical, social and biological factors predicting outcome in the new cases of psychoses in the Veneto Region, Italy.

Schizotaxia: epidemiology and clinical and neuropsychological validation.

Assessing self-perceived discrimination and stigma following the first episode of psychosis by using the DISC-11 Scale.
(A. Lasalvia, S. Zoppei, G. Thornicroft, D. Cristofalo & M. Ruggeri)

International Study of Discrimination and Stigma Outcomes (INDIGO Multisite Study)
(L. Burti, A. Lasalvia & M. Tansella)

Extended endophenotypes in early psychosis.
(E. Ira, C. Bonetto, M. Ruggeri & S. Tosato)

Physical health and lifestyle in patients at their psychosis onset. A multicentric European Study.
(A. Lasalvia, S. Tosato & M. Ruggeri)

Anti Stigma Programme: European Network (ASPEN).
(A. Lasalvia, C. Bonetto, L. Burti, D. Cristofalo & S. Zoppei)

Inflammation and depression in a cohort of subjects affected by HCV hepatitis
(S. Tomassi, M. Barcella, M. Ruggeri, C. Bonetto, C. Carolo & S. Tosato)

Research Unit

Clinical Psychopharmacology & Drug Epidemiology

Coordinator: Professor Corrado Barbui, MD

Long acting antipsychotics: longitudinal multicenter study
(G. Ostuzzi, I. Bighelli, M. Castellazzi, M. Nosè, M. Purgato & C. Barbui)

Use of Psychotropic drugs and QTc abnormalities in psychiatric inpatients: a multicentre study
(M. Nosè, I. Bighelli, M. Castellazzi & C. Barbui)

Antidepressants versus placebo for panic disorder: systematic reviews and meta-analyses of randomised controlled trials.

38
Benzodiazepines versus placebo for panic disorder: systematic reviews and meta-analyses of randomised controlled trials.
(F. Girlanda, M. Castellazzi, I. Bighelli & C. Barbui)

Antidepressants versus benzodiazepines for panic disorder: systematic reviews and meta-analyses of randomised controlled trials.
(I. Bighelli, C. Trespidi, M. Castellazzi, F. Girlanda & C. Barbui)

WHO Mental Health Gap Action Programme (mhGAP)
(C. Barbui)

Randomized evidence of psychosocial interventions in children exposed to traumatic events in low and middle income countries.
(M. Purgato, C. Gastaldon, D. Papola & C. Barbui)

Antipsychotic drug exposure and risk of pneumonia: systematic review and meta-analysis of observational studies.
(M. Nosè & C. Barbui)

Efficacy of antidepressants in patients with cancer.
(G. Ostuzzi & C. Barbui)

Efficacy of vortioxetine in patients with major depression.
(G. Ostuzzi & C. Barbui)

Psychological distress in refugees and asylum seekers in the area of Verona, Italy.
(M. Nosè, G. Turrini & C. Barbui)

Psychosocial and Pharmacological Interventions for Refugees and Asylum Seekers in High-Income Countries with Post-Traumatic Stress Disorder: A Systematic Review
(M. Nosè, F. Ballette, I. Bighelli & C. Barbui)

Research Unit
Brain Imaging & Neuropsychology

Coordinator: Prof. Paolo Brambilla, MD, PhD

Disabilità Cognitiva e Comportamentale nelle Demenze e nelle Psicosi.
Obiettivo A.9 "Basi Morfofunzionali, Cognitive e Genetiche delle Psicosi Maggiori: uno Studio Integrato Longitudinale".

GET UP – Contrabass. CogNitive Neuroendophenotypes for Treatment and RehAbilitation of psychoses: Brain imaging, inflAmmation and Stress.

Patologia della Sostanza Bianca ed Espressione Genica Immunitaria nel Disturbo Bipolare: uno Studio di Brain Imaging Multimodale (MANDRAKE).

(sede di Verona: M. Bellani, V. Marini, C. Perlini, O. Danzi, N. Dusi, G. Rambaldelli, Paolo Brambilla)

Following Imaging and Resilience features in Schizophrenia and affective disorders (FIRST).

Prevention on Psychotic and Affective Events (PREVENT).

The neurobiological underpinnings of social psychiatry.

Cognitive and language training as a rehabilitative approach in major psychoses.

(C. Perlini, V. Marinelli, M. Bellani, G. Rambaldelli, P. Brambilla)

The use of Near Infrared Spectroscopy (NIRS) for the investigation of connectivity in psychiatric disease and its potential implementation for the cognitive rehabilitation of major psychoses.

Investigation of brain connectivity in twins.

Neurodevelopmental markers of Autism.

Evaluation of white matter alterations using diffusion tensor imaging techniques.

The European Network on Psychosis, Affective disorders and Cognitive Trajectory (ENPACT)

Classification of psychiatric disorders using brain imaging data.

A multicentre T1/DTI study of bipolar disorder (Paris, Creteil, Verona/Udine, Galway, Mainz, Pittsburgh).

PHYSICO-DSM-VR. Physical co-morbidity, poor health behavior and health promotion in Verona patients with functional psychoses: a Prevalence Study and a Randomised Controlled Study.

(\textit{L. Berti, E. Bonfioli, M. Mazzi \\& L. Burti})
Information giving in psychiatric and general hospital patients.
(C. Goss, L. Del Piccolo, M.A. Mazzi, Rimondini & Ch. Zimmermann)

The involvement of psychiatric patients in the decision making process.
(C. Zimmermann, L. Del Piccolo, C. Goss, T. Pozzan, M.A. Mazzi & M. Rimondini)

Validation of the consensus definitions of patient cues/ concerns and related physician behaviour during medical consultations.
(L. Del Piccolo, C. Goss, M.A. Mazzi, M. Rimondini & C. Zimmermann)

INCA The informative needs of breast cancer patients and their involvement in treatment decisions.
(C. Goss, L. Del Piccolo; C. Zimmermann, M.A. Mazzi, A. Bottacini)

How breast cancer patients express their emotions during first oncological consultations after surgery.
(L. Del Piccolo, C. Goss, M.A. Mazzi, A. Bottacini)

The informative needs of psychotic patients and their family members and their involvement in treatment decisions.
(C. Goss, L. Del Piccolo, C. Zimmermann, M.A. Mazzi, A. Bottacini)

BIO-COM Prognostic disclosure in the palliative phase of breast cancer: Quality of communication from a patient perspective.
(L. Del Piccolo, C. Perlini)

GULIVER a multi-centre study on patients’ perception of doctors’ clinical communication skills (Maria Angela Mazzi, Michela Rimondini. Coordinator: Jozien Bensing)

GULIVER II a multi-centre study on patients’ perception of doctors’ clinical communication skills (Maria Angela Mazzi, Michela Rimondini. Coordinator: Jozien Bensing) all'interno dello studio QUALICOPC, a multi-country study evaluating quality, costs and equity in primary care (national coordinator: dr.ssa Seghieri)

PATIENTS-PATient Involvement and EmpowermeNT in Safety-Psychiatry
Opportunità e criticità legate all’empowerment del paziente nella gestione del rischio clinico in psichiatria. Un'analisi delle opinioni di operatori sanitari rilevate attraverso la metodologia dei focus group (fg). (Maria Angela Mazzi. Coordinator: Michela Rimondini,)

Hematologists' attitude toward the disclosure of a new diagnosis of malignant disease: results from a multi-center survey in northern italy (Michela Rimondini, Claudia Goss, Maria Angela Mazzi. coordinatore: Cristina Tecchio).

Incidenza e cause del deficit erettile nei pazienti sottoposti a trapianto allogenico di cellule staminali emopoietiche per emopatie maligne (Michela Rimondini-coordinatore: Cristina Tecchio).
CONGRESSES, COURSES AND SEMINARS PROMOTED BY THE STAFF OF THE VERONA GROUP*

* as organizers and/or members of Scientific Boards

Prof. Lidia Del Piccolo
Verona, 13-14th February 2015.
Organizzazione del XIII Invitational Workshop - Going back to methodological issues and sequences. Verona Network on Sequence Analysis. Fondazione Centro Studi Campostrini.

Prof.ssa Mirella Ruggeri, Dott.ssa Katia De Santi (Segreteria Scientifica)
Verona, 6 and 20 March, 15 May, 5 June, 18 September and 23 October 2015
La psicoterapia cognitivo comportamentale (CBT) negli esordi psicotici. ECM

Prof.ssa Mirella Ruggeri, Dott.ssa Katia De Santi (Segreteria Scientifica)
Verona, 13 March, 17 April and 15 May 2015
L’intervento con i familiari dei pazienti all’esordio psicotico. ECM

Prof. Lidia Del Piccolo
19 marzo 2015 Università degli Studi di Verona
“L’ospedale dei pupazzi” – seminario di formazione sul concetto di malattia nel bambino rivolto agli studenti di Medicina del SISM - Segretariato Italiano Studenti Medicina.

Prof. Corrado Barbui
17 April 2015, Verona
STAR Network Meeting 2015. “Progetto Depot”: disegno di studio e pianificazione del lavoro

Prof. Lidia Del Piccolo
rEACH Junior Investigators Summer School 2015

Dr. Marcella Bellani
23 September 2015, Kidsuniversity: Il Laboratorio Dei Pensieri, Borgo Roma Hospital, Verona.

Dr. Marcella Bellani, Dr. Cinzia Perlini
20 October 2015, ALLENAARE LA MENTE PER SUPERARE LA CRISI- La riabilitazione cognitiva delle psicosi: presupposti teorici, metodi e tecniche di intervento- held by Prof. Antonio Vita and Dr. Stefano Barlati, University of Verona.

Dr.ssa Michela Rimondini
Ottobre 2015, Università degli Studi di Verona, Azienda Ospedaliera Universitaria Integrata, Azienda ULSS20.
L’impatto psicologico dell’evento avverso - Seminario di presentazione del volume: “Apprendere dagli errori”

Dr.ssa Michela Rimondini

Dott.ssa Katia De Santi
Verona, 4 and 9 November 2015
La relazione terapeutica con il paziente grave in SPDC. ECM
Dott. Tecla Pozzan, Elisa Croce Tornieri, Emanuela Turrini, Prof. Mirella Ruggeri (Segreteria Scientifica)
Verona, 17 November, 1 and 15 December 2015

*Social Skill training per il trattamento della psicosi. 2° Edizione* ECM

Dr.ssa Michela Rimondini
Novembre 2015, UOC Psichiatria Policlinico Azienda Ospedaliera Universitaria Integrata

*La relazione terapeutica con il paziente grave in SPDC* ECM (8ore-2 ediz.)
